

Level indicators for drums of oil and other liquids

Installed in the small (3/4") hole of 60 and 210 liter drums detects the amount of product left in the drum

It is installed on all 60 and 210 liter commercial drums, equipped with a double scale to detect the amount of product left in the drum. Suitable for use with industrial, emulsifiable, vehicle, waste oil, diesel and other non-corrosive liquids such as antifreeze, etc.

ADVANTAGES:

Indicates the amount of product left in the drum
Simplifies stock-out and inventory control
Mechanical operation, requires no batteries or power supply
Simple to assemble and use

EASY TO USE:

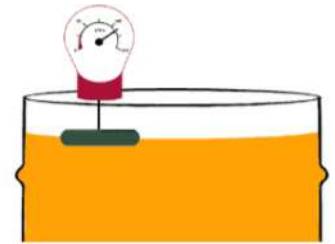

Remove the cap from the 3/4 air intake hole;
Put the level indicator float in the air intake hole,
the indicator remains fixed and prevents dirt from entering the drum; while the air intake operates as usual.
The float remains at the liquid level, and the scale indicates how many liters the drum contains.
When the drum empties, remove the level indicator and slowly lift; the float will turn vertically, allowing extraction from the air intake hole; the string will roll up automatically and the indicator can be used again.
